

OPERATIONS MANUAL · V1.0

KSB White Glove Service

The shop platform for intake, inspection, estimating, approvals, and delivery — built so every vehicle gets a consistent, high-trust experience from drop-off to handoff.

 **Efficiency** **Profitability** **Customer Satisfaction**

Quick Start Guide

Getting a new shop running in about five minutes: sign in, set up the organization, and invite your team.

First login & navigation

Sign in at `/login` with your email and password. Once authenticated, the left sidebar is your home base — it adapts to your role, showing only the sections you're permitted to use:

NAV ITEM	VISIBLE TO
Dashboard	Everyone
Vehicles	Super Admin, Shop Admin, Service Advisor, Technician, Delivery Specialist
Service Requests	Super Admin, Shop Admin, Service Advisor, Technician
Inspections	Super Admin, Shop Admin, Service Advisor, Technician
Checklists	Super Admin, Shop Admin, Service Advisor, Technician, Delivery Specialist
Customers	Super Admin, Shop Admin, Service Advisor
Schedule / Appointments	Super Admin, Shop Admin, Service Advisor (+Technician for Schedule)
Reports	Super Admin, Shop Admin, Service Advisor
Notifications / Settings	Everyone

Set up your organization

- 1

Open Settings → Organization
This is the form of record for how your shop appears on every estimate, receipt, and customer email.
- 2

Enter business details
Business Name, Phone, and Logo URL (with a live preview) appear on every printed document.
- 3

Enter your address
Address, City, State, and ZIP — used on receipts, inspection reports, and the public booking page.
- 4

Set your default tax rate

Entered as a percentage (default 8.25%); applied automatically to new estimates.

5

Add your Google Place ID

Powers the one-click review-request link sent after delivery. Without it, review requests are disabled.

6

Configure business hours

Set open/close time per day (Monday–Sunday) or mark a day Closed. These hours default to 8:00 AM–5:00 PM, Sunday closed, and drive available slots on the public booking page.

7

Save

The button reads "Save Changes," then "Saving...," then confirms "Saved."

Add your team

Go to **Settings → Team** and select **Add Team Member**. Only Super Admins and Shop Admins can invite. Enter the person's name, email, and role — the system creates their login automatically and emails them a sign-in link. New accounts are provisioned with a temporary password; encourage new members to reset it on first login.

Team rows can be **deactivated** (and later reactivated) instead of deleted, preserving their history on past work orders.

ROLES AT A GLANCE

super_admin

SUPER ADMIN

Full system access across the organization, including roles the invite screen otherwise reserves.

shop_admin

SHOP ADMIN

Runs day-to-day operations: organization settings, team, canned jobs, and every workflow screen.

service_advisor

SERVICE ADVISOR

Owens intake, estimating, customer approvals, appointments, and reports — the primary customer-facing role.

technician

TECHNICIAN

Performs inspections and service work; updates line item and inspection status from the shop floor or the iOS app.

delivery_specialist

DELIVERY SPECIALIST

Handles vehicles and checklists at the final stage — pre-delivery inspection and customer handoff.

customer

CUSTOMER

No dashboard login. Customers interact only through emailed/texted links — approval pages, delivery notices, review requests.

 PRO TIP

Set your Google Place ID and business hours on day one — both are silent dependencies. Without a Place ID, review-request sends fail with an error pointing back to this screen; without hours, the public booking page has no valid time slots to offer.

The Vehicle Lifecycle

Every vehicle moves through the same eight stages, from the moment it arrives to the follow-up after it leaves. Each stage below links to its own workflow.

01 • Intake — new vehicle check-in

From the Dashboard, click **New Intake** (or Vehicles → the + button). The intake wizard has four steps: **Vehicle** → **Customer** → **Service** → **Inspection**.

- 1 Vehicle**
 Enter the 17-character VIN, or tap **Scan VIN Barcode** to read it with the camera. Once the VIN is complete, Year/Make/Model/Trim decode automatically from NHTSA data. Round out with Color, Mileage, License Plate, and State.
- 2 Customer**
 Full Name, Email, and Phone. This creates (or matches) a customer record.
- 3 Service**
 Choose a service type — Performance Inspection, Routine Service, Cosmetic Repair, Pre-Purchase Inspection, or Delivery Verification — and add a description of what brought the vehicle in.
- 4 Inspection**
 Confirms which inspection sections will be auto-created, then **Submit & Start Inspection** creates the vehicle, service request, and a ten-section inspection in one action.

BEHIND THE SCENES

Submitting intake creates the vehicle (status `intake_started`), a service request (status `submitted`), and an inspection pre-loaded with ten sections — Exterior Front, Exterior Rear, Driver Side, Passenger Side, Wheels & Tires, Glass & Lights, Interior, Engine Bay, Warning Lights, and Final

Notes — each with its own checklist items. A "Vehicle Received" email goes to the customer automatically if an email was captured.

02 • Inspection — multi-point walkaround

Open the vehicle's inspection to work through the ten sections created at intake. Each section groups related checklist items you mark pass/fail as you go.

- **Damage Map** — tap directly on a vehicle diagram to drop a marker at the exact spot of a scratch, dent, or issue. Rate each marker Minor, Moderate, or Severe and add a note; markers are color-coded so severity is visible at a glance.
- **Photos** — attach photos to document condition at intake, protecting both the shop and the customer.
- **Exterior / Interior / Engine Bay / Wheels / Glass** — dedicated tabs for checking each system.

An inspection moves through statuses: `not_started` → `in_progress` → `completed` (or `needs_attention`) → `signed_off`.

03 • Estimate — build the line items

On the service request's detail page, add line items by type: **Labor**, **Parts**, **Sublet**, **Fee**, or **Discount**. Each line has a description, quantity, and unit price, and rolls up automatically into the estimate total.

Rather than typing every line from scratch, click **Templates** to insert a saved canned job — it drops in the correct labor and parts lines with pricing already filled in.

04 • Approval — send it to the customer

When the estimate is ready, click **Send for Customer Approval**. This generates a secure, time-limited link (valid 72 hours) and opens a dialog where you can copy the link or text it directly via SMS.

The customer opens the link with no login required. They see each line item as a toggle — approved by default — and can decline individual items or approve everything in one tap. Their response updates the service request instantly and notifies the advisor who sent it.

05 • Service — work in progress

Once approved, the service request status moves to `in_progress`. Technicians work through approved line items, updating each line's status (pending → in_progress → completed) as work is finished, either from the web app or the iOS app on the shop floor.

06 • Quality Check

Before a vehicle is released, it passes through `quality_control` status — a final review that completed work matches what was approved and nothing was missed.

07 • Delivery — the handoff

Open the vehicle's Delivery tab and click **Create Delivery Checklist** to generate the standard twelve-point pre-delivery checklist: final wash and detail, interior clean-up, verifying all work is complete, fluid levels, tire pressures, removing seat/floor protectors, resetting the maintenance light, confirming no tools were left behind, a walkaround with the customer, reviewing the work performed, and collecting a signature.

Once every item is checked, **Mark Vehicle as Delivered** becomes available — this closes out the service request (status `completed`) and sends a delivery confirmation email to the customer.

08 • Follow-up — ask for a review

Immediately after marking a vehicle delivered, the Delivery tab surfaces a **Send Review Request** card. One tap texts the customer a direct link to leave a Google review — timed for the moment satisfaction is highest.

◆ IMPACT

This eight-stage lifecycle is the backbone of the platform: it turns a walk-up drop-off into a tracked, auditable job with a paper trail at every handoff — from the technician who inspected it to the advisor who quoted it to the customer who approved it.

⚙ Efficiency Features

Tools that cut the minutes out of every job — so advisors quote faster and technicians spend more time turning wrenches.

Canned jobs library

Under **Settings** → **Service Templates**, build a reusable library of common jobs — brake jobs, oil changes, diagnostics — each with a name, category (Maintenance, Brakes, Engine, Transmission, Suspension, Climate, Electrical, Diagnostics, Detailing, Other), labor hours, labor rate, and parts cost. The estimated total calculates live as you type. On any estimate, clicking **Templates** inserts a job's labor and parts lines in one click instead of retyping pricing every time.

VIN decoder

Typing (or scanning) a 17-character VIN during intake automatically pulls Year, Make, Model, Trim, and other specs from NHTSA's public database — no manual lookup, no typos in the vehicle record.

Appointment scheduling & calendar

The Appointments screen filters by Upcoming, Today, Past, and All, with a live count badge on Today. Each appointment moves through a defined status path — `scheduled` → `confirmed` → `checked_in` → `in_progress` → `completed` (with `cancelled` and `no_show` as exits) — and the correct next action is always one tap away on the card itself.

Public booking page

Share your booking link (`/book`) with customers directly — no account needed. It's a three-step flow: choose a service type, pick a date and open time slot (only real availability is shown, pulled live from your calendar), then enter contact info to confirm. Bookings land straight in your Appointments list.

iOS app for mobile technicians

Everything a technician needs on the shop floor — vehicle lookup, inspections, appointments — lives in the iOS app, so work doesn't have to route back through a shop terminal. Full guide in [Section 7](#).

Damage map

Instead of describing damage in free text, mark it directly on a vehicle silhouette. Tap the exact panel, choose a severity, and add a note — available on both web and iOS, so a marker dropped in the bay shows up immediately in the office.

PRO TIP

Build out your canned jobs library before your first busy week. A five-minute setup session (your ten most common services) pays for itself the first time an advisor quotes a brake job in one click instead of five.

Profitability Features

Tools that protect margin and surface revenue that would otherwise fall through the cracks.

Estimate builder

Every line item carries a type (Labor, Parts, Sublet, Fee, Discount), quantity, and unit price. Your organization's default tax rate applies automatically, and the subtotal always excludes any line the customer has declined — so what you see is what you'll actually collect.

Declined job tracking

When a customer declines a line item on the approval page, it's automatically logged as a declined job — tied to the customer, vehicle, and original line — rather than simply disappearing. This gives advisors a working list of recommended-but-not-yet-done work to revisit on the vehicle's next visit, turning a "no" today into a follow-up opportunity later.

◆ IMPACT

Declined work isn't lost revenue — it's deferred revenue. Reviewing the declined jobs list before a customer's next appointment is one of the highest-leverage five minutes an advisor can spend.

Analytics dashboard

The Dashboard gives an at-a-glance read on the shop: Vehicles In Service, Active Work Orders, Awaiting Approval, and Total Customers as headline stats, plus dedicated **Approved Revenue** and **Pending Estimates** cards. A Service Request Pipeline bar shows how work is distributed across every stage from Submitted through Completed, and Recent Activity keeps the whole team pointed at what moved last.

PDF & printable reports

Reports are generated straight from live job data — no re-typing:

INSPECTION REPORT

Condition badges per item (Good / Fair / Poor / Needs Attention), with summary

ESTIMATE

Formatted like a proper quote: itemized by type, declined lines

RECEIPT

Thermal-printer formatted (80mm), totals only

8/5/26, 9:52 AM counts — hands the customer objective evidence for recommended work.	KSB White Glove Service — User Manual broken out separately, ready to print or attach.	completed/approved work — a clean final receipt at pickup.
---	---	--

Audit trail

Settings → Audit Log records who did what and when — vehicle check-ins, technician assignments, estimates created, approvals sent, customer responses, status changes, and more — attributed to the team member who took the action. It's your accountability record if a job's history is ever in question.

♦ Customer Satisfaction Features

The customer never has to call and ask "where's my car?" — the platform tells them.

Automated notifications at every stage

Email and SMS go out automatically at the moments that matter: vehicle received at intake, estimate ready for approval, delivery ready, and vehicle delivered. Each uses a shop-branded template so the customer always recognizes who it's from.

Customer approval page — no login needed

Customers approve or decline work from a single texted or emailed link. No account, no password. They can toggle individual line items, leave a comment, and submit — the advisor is notified of the response the moment it's submitted, and the link itself expires automatically after 72 hours for security.

Public booking page

Customers can book their own appointment at [/book](#) without ever picking up the phone — a modern convenience that also reduces phone-tag for your front desk.

Google Reviews follow-up

Sent at the ideal moment — right after a satisfied customer picks up their vehicle — with a direct link straight to your Google review form. No searching required on the customer's end.

Delivery checklist

The twelve-point pre-delivery checklist (see [Lifecycle, Step 7](#)) ensures every vehicle leaves clean, complete, and walked through with the customer before they drive off — the last impression, done right every time.

Transparent status tracking

Because every vehicle carries a real status through a defined pipeline — from intake through delivery — advisors can always answer "where's my car?" accurately and instantly, without digging through paper tickets or texting a technician to check.

◆ IMPACT

"White glove" isn't a slogan here — it's the approval flow requiring no login, the delivery checklist requiring a signature, and the review request landing while the good feeling is still fresh.

Settings & Configuration

Everything under the Settings tab: Organization, Team, Service Templates, and the Audit Log.

Organization settings

Business Name, Phone, Logo URL, full Address, Default Tax Rate, Google Place ID, and per-day Business Hours. Covered step-by-step in [Quick Start](#).

Team management

Invite members by email, name, and role (Shop Admin, Service Advisor, Technician, or Delivery Specialist are assignable from this screen). Deactivate a departing team member rather than deleting them, to preserve their history on past jobs; reactivate any time.

Notification preferences

The in-app Notification Center (bell icon, bottom of the sidebar) organizes alerts into **All**, **Unread**, **Updates**, and **Alerts** tabs, covering everything from intake and approval events to flagged issues and completed reports.

Canned jobs management

Manage your Service Templates library — add, edit, deactivate, or delete templates; toggle a template Active/Inactive without deleting its history. See [Efficiency Features](#) for the day-to-day use case.

iOS Mobile App Guide

The companion app for technicians and advisors working from the bay, not a desk.

Login & navigation

Sign in with the same credentials used on the web app — your account and role carry over automatically, and you'll see the same vehicles, inspections, and appointments as your team on the web.

Vehicle list & detail views

The vehicle list is searchable by name, VIN, or license plate, with quick filter chips for each status. Tap a vehicle to open its detail view, organized into seven tabs: **Overview, Inspections, Service, Checklists, Delivery, Files, and History** — pull down to refresh at any time.

Mobile inspections with photo capture

Work through inspection sections as swipeable cards. Each item has a clear Pass or Fail toggle — marking Fail automatically opens a notes field — plus an Add Photos button that jumps straight into the camera. A visible pass/total count keeps track of section progress, and a Complete button (with a confirmation prompt) closes out the inspection when every item's been reviewed.

Damage marker tool

The same tap-to-mark damage map from the web app, built natively: tap a spot on the vehicle outline, choose a severity, and it syncs immediately with the office.

Appointments management

Mirrors the web Appointments screen — Upcoming, Today, Past, and All filters, with the correct next action (Confirm, Check In, Start, Complete, etc.) always surfaced right on the card.

Notifications

All, Unread, Updates, and Alerts tabs, with unread items marked by a gold dot and a one-tap Mark All Read. Tapping a notification jumps straight to the related vehicle.

i NOTE

Intake can also be started directly from the iOS app — the same four-step Vehicle → Customer → Service → Inspection wizard, including VIN scanning, works from a phone in the parking lot at drop-off.

★ Tips & Best Practices

Small habits that compound into a smoother-running shop.

Workflow optimization

- **Front-load your canned jobs.** The first week's time savings on estimating alone justifies the setup.
- **Scan the VIN, don't type it.** It's faster and eliminates transposition errors that cause parts-ordering mistakes down the line.
- **Complete inspections before quoting.** An estimate built from a completed inspection is more defensible to the customer and less likely to need revision mid-job.
- **Send the approval link by SMS, not just email.** Text messages get opened faster — critical when a bay is waiting on a yes/no.

Common scenarios

CUSTOMER DECLINES PART OF AN ESTIMATE

No action needed to "clean up" — the declined line is automatically tracked. Revisit the Declined Jobs list at the customer's next visit to re-offer the work.

VEHICLE NEEDS WORK BEYOND THE ORIGINAL QUOTE

Add new line items to the same service request and send a fresh approval request — the customer gets a new link reflecting the updated total.

TEAM MEMBER LEAVES

Deactivate, don't delete, from Settings → Team. This preserves their name on historical audit log entries and past work orders.

GOOGLE REVIEW REQUESTS AREN'T SENDING

Confirm a Google Place ID is set in Settings → Organization — this is the single most common cause of a silent failure here.

⚠ KEEP IN MIND

Approval links expire after 72 hours. If a customer reports an expired link, generate a fresh approval from the service request rather than resending the old one.

💡 PRO TIP

Check the Dashboard's Service Request Pipeline each morning before the shop opens — it's the fastest way to spot a job stuck in Awaiting Approval that needs a follow-up call.
